

RENESCO INDIA PVT. LTD.

Providing Geotechnical Solutions in Civil Engineering

SANJAY KUMAR
CEO

It has been an impressive journey to witness the evolution of leaders. Ten years ago we never realized that leadership can be such a complex mechanism. While the basic role of the CEO in managing their company has changed little over the years, the context in which they operate has shifted significantly.

It is indispensable to take stakeholders at all levels, which includes employees and the community at large, into consideration while deciding a way that was out of the question just a few years ago.

Ask a working-class what they look for in portfolio companies, and almost everyone will tell you they would rather put their bet on an average strategy in the grasp of great talent than on a great strategy in the hands of average talent. The leaders, however, put equal sternness and focus on achieving greatness on both strategy and talent.

Sanjay Kumar the CEO of Renesco India Private Limited is accepted as one of the chief personalities within the Tunnel waterproofing community.

Preservation of underground structures from the irruption of water is of significant technical and economic importance. The duty for tunnel waterproofing includes safe operation and durability. Today, waterproofing of underground traffic structures is routinely required by specialists.

Sanjay was previously working with Marti India (Subsidiary of Marti Group of Switzerland). He was given the assignment to start Renesco in India.

This was something very new during those days. Recalling the challenges he faced in the journey, and how he overcame these, he says

“Tunnel waterproofing is a specialized work and it was a big challenge to train our manpower and Engineers to deliver high-quality work as per the set norms specified in DVS code. It became possible with the help of our colleagues in Switzerland who trained our workforce

and finally, we could get the required certification to perform the job procedurally. Finally, Renesco India was established in 2014 and we took the challenge to provide bone dry (100% watertight) tunnel to the esteemed client and we could do it successfully. We got very good recognition in the industry and orders started falling in our basket. Now we have a fully specialized team in India and we get continuous support from our parent company in terms of technological advancement and to enhance the skill of our technical team.”

The company especially works for defense, RVNL, NHAI, and NTPC.

“We do all types of waterproofing in Tunnels, basement bunkers, and injection grouting. We have an expert team to deliver high-quality standards. In addition to waterproofing we do core drilling for mines and slope stabilization using Cellular Confinement system,” says Sanjay Kumar.

Renesco is a leading international company, specialized in the field of structural waterproofing and injections/ grouting services. Renesco is part of the Marti Group in Switzerland, an owner-operated family business that specializes in underground construction. Marti is a multi-disciplined organization with services that range from building transportation tunnels as a contractor of record to performing specialty underground services on a subcontract basis through its wholly-owned Renesco Group subsidiary.

KEY AREAS OF EXPERTISE:

- Thermoplastic welding of all kinds of geomembranes, like PVC, TPO/TPE, FPO, PEHD, etc.
- Application/Installation of sheet waterproofing, loose-laid, fully bonded, post-applied or pre-applied
- Application of liquid and spray-applied waterproofing and coatings
- Fully automatically installation in tunneling via hot-melt applied sheet waterproofing
- Application of frost and waterproofing protection (PE-foams, PELD, PEHD)
- The setting of anchor bolts including specialized drilling services and the installation of concrete elements
- All kind of chemical (acrylate, polyurethane, silicate, etc.) and cementitious grouting/injection works
- Compensation, permeation and contact grouting, ground stabilization
- Curtain injection, injections into hard and unconsolidated rock
- Specialized drilling services
- Controlling, monitoring and data management

WANT TO KNOW MORE ABOUT THIS PROMISING COMPANY?

We had a conversation with the CEO to bring you some exclusive insights. Here’s a quick glimpse.

HOW DO YOU KEEP UP THE PACE WITH THE CHANGING MARKET TRENDS?

It’s very challenging in India but we can maintain our business potential in very extreme conditions. There are many quality-conscious clients in India and we get business regularly. We provide all kinds of specialty services for sealing operations in underground structures against pressurized and non-pressurized water, as well as injection/grouting works. The main areas of application include national and international large-scale projects in tunneling and infrastructure, as well as in the hydraulic, environmental and rehabilitation sectors.

WHAT ARE THE VALUES AND ETHICS YOU FOLLOW IN YOUR PERSONAL AS WELL AS PROFESSIONAL LIFE?

To deliver a project within a committed time frame, execution of work as per set norms of DVS guidelines and sourcing of material from an approved company.

HOW HAS YOUR COMPANY COPED WITH THE LATEST TECHNOLOGY?

Right from the beginning, the vision of the company is to adopt and bring the latest technology in the country, We keep visiting our overseas sites & we do regularly participate in conferences overseas and in India to keep ourselves updated. Renesco has become an international leader in tunnel waterproofing, geomembrane application, and specialty tunnel grouting services. The company currently operates several divisions in different countries.

WHAT MILESTONES AND ACHIEVEMENTS DO THE COMPANY BOAST OF?

Our company has set milestones in the waterproofing industry. We are the only company that gets their employees trained from TUV (Plastic Welding Certification Agency) as we believe in delivering quality jobs and maintaining the company’s reputation which makes us different from other waterproofing companies. Further, our trained staff are more than capable of achieving the project completion deadlines, even they have set new progress records ever recorded in a project over the country.

HOW ARE YOU GIVING BACK TO SOCIETY (CSR)?

By introducing the latest technologies in the field of waterproofing we are spreading awareness in the construction industry why waterproofing is essential, how product selection should be done after studying site conditions, why application works are important, why we should follow technical guidelines from a professional and expert team only. We hope we are saving nations money with such awareness and creating work opportunities in the market.
